URBAN
## BIODIVERSITY
HUB

The Urban Biodiversity Hub (UBHub) is a website that increases the capacity of local governments to implement effective biodiversity planning, management, measurement, and collaboration. UBHub.org serves two primary purposes: to be a public repository for urban biodiversity activities and resources and to aid local governments in planning and managing their approach to biodiversity conservation.

Urban

any built-up or human-centered area: a town, park, city, campus, or community

Biodiversity Conservation

any activity that improves humanity's relationship with nature or promotes healthy ecosystems

Topics we cover:

• ecosystem services
• environmental education
• urban agriculture
• green and blue infrastructure
• ecological footprints
• climate mitigation
• access to nature
• backyard habitat and gardens
• urban biodiversity monitoring
• sacred and healing nature
• urban ecology

Value Added

UBHub.org increases the capacity of local governments to plan for and manage biodiversity. The site connects academics, experts, and practitioners to address challenges on the ground together. It promotes urban biodiversity resources developed by NGOs, governments, and academics, and it allows local governments and other groups to coordinate their efforts. Our goal is to promote biodiversity mainstreaming, compile associated tools, raise awareness of biodiversity planning, and ultimately assist local governments and their partners to conserve biodiversity.
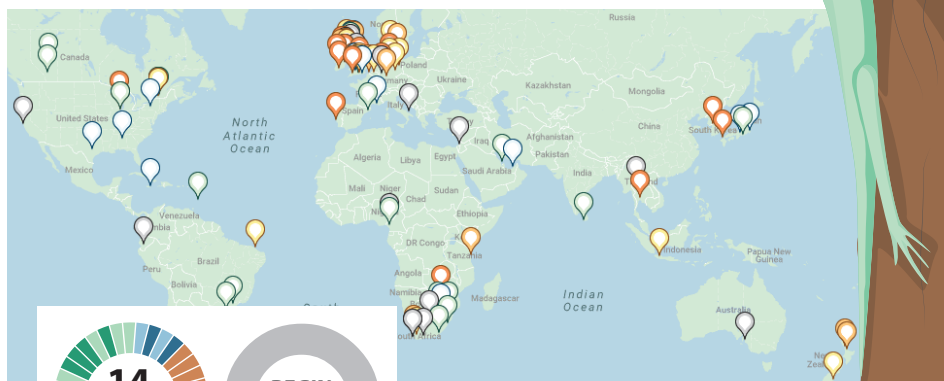

guideHub

The resources page highlights guidelines and other helpful tools to help cities and practitioners choose the right resources.

mapHub

mapHUB displays hundreds of biodiversity activities, policies, plans, awards, and case studies worldwide. Here, users can search by location, keyword, programme, or demographic and see the results on a map or in a table.

BEGIN NEW CUSTOM

myHub

In myHub, local governments can track and manage biodiversity planning goals and indicators. myHub allows users to manage multiple frameworks and accommodates stepwise programs, comparative award-based systems, and quantitative indices. From the myHub dashboard, users can manage their teams' progress, discuss challenges with experts and peers on the forum, and produce automated progress reports.
